Sample Testing Policy:

Since material characteristics vary widely it is often difficult to predict flow-rates or the particle size output that our machines could achieve. Generally speaking, processing a small quantity of product is an excellent way for both ACC and the customer to evaluate Machine selection. Based on the results of the product test and our experience with other materials, we generally achieve a good understanding of the output size and the flow-rate that can be achieved with our equipment. For this reason we typically run our tests at no charge and, although the availability of specific machines can vary, we keep several different types of our machines available to run tests.

We generally limit the amount of material processed to less than 100 pounds. One or two 5-gallon pails of material are generally sufficient for our purposes. We suggest that you provide us with both typical problem lumps and the worst case material for our best evaluation.

We do not run tests on hazardous or explosive materials, and require that a Material Safety Data Sheet or equivalent be supplied for all samples that require one. Any special handling requirements should be clearly outlined prior to shipping.

We ask that the customer fill out and include the attached Sample Testing Form, notify us before shipping the sample, and enclose a business card or other reference to help us identify the source of the sample when it arrives. We are unable to accept collect shipments at our Customer Test Center without prior arrangement. Materials sent collect are subject to being returned at your expense.

The customer is responsible for inbound and outbound shipping costs. Unless other arrangements have been discussed previously we will ship the processed sample back via UPS Collect. To avoid the need for Purchase Orders or Credit Card charges, please provide your shipper number along with the sample. Any special shipping documentation or instructions should also be provided.

Note: it is our policy to return all the material we have received from you, including wastes. If you believe your sample is non-hazardous and suitable for disposal by our municipal waste company we require a letter on your company letterhead stating this. This letter will be included with the sample when disposed of.

Please note that our test machines are exposed to a variety of different materials during their lifetime. Although the machines are cleaned between tests we can make no guarantee that your test sample has not been contaminated by materials processed in previous tests.

Unfortunately, we cannot safely handle all materials and reserve the right to return unsuitable materials untested.

Note: More extensive testing, higher volumes of test materials, sieve analysis, witnessed tests, test videos etc., are also available but may require a fee. This is evaluated on a case by case basis, and if there is a charge we generally credit the cost towards purchase.

Samples should be sent to:
